Solar System Guidelines

The following is the revised verbiage to be in the Architectural Guidelines.

3.1.4 Solar Systems. Solar panels installed need to be parallel with the roof, and no more than six inches (6") from the plane of the roof. Colors or systems shall be subdued and should not contrast with roof color. This shall include all piping and accessory mechanical devices. Any flashing or conduit used must be painted to match the home. Only those items required to be on the roof will be permitted. All other items shall be located within the residence's yard and screened.
